

## ENSE 405

### Activity #4: An emerging picture

Name: Onisokien Ayonoadu & Jaskirat Josan

Community (UN SD goal): Goal 2 – Zero Hunger

Date: 14-3-21

#### Instructions:

Using your researched information from activities 1-3, fill out the flowing comparing the current state of the art with what you think new (software) innovations could bring to the community

Covering the orientations	
Compare the left-hand column of the document “Technology configuration inventory” table with the right-hand column of the document “Community characteristics & orientation” table. What do you notice about the match (or mismatch) between your dominant community orientations and the current configuration of tools?	
How well does the technology inventory cover the orientations? What themes emerged from both the community orientations and the technology configuration from your colleagues’ notes	The technology inventory document does a decent job in covering the orientations. Our project can be further refined however the time restriction does not allow for that. Thus, it has been left for future MVP’s.
<input type="checkbox"/> Are you almost there? <input type="checkbox"/> Are there big gaps?	We are still working on it. However, we cannot identify any big gaps.
What is the range of skills? If their interests and/or skills are diverse, could it cause conflict or distraction?	The range of skills can vary from intermediate to advanced. The technological skills do not pose as a distraction for our web app.
Achieving integration	
Look at all the pieces of your configuration	
What level of integration and interoperability has been achieved?	There is currently a way to view progress, however it is currently planned to be tabular instead of graphical due to technical hurdles and time restrictions. Further integration of a graphical format to view progress and results would benefit our community members.
Where are there big gaps	No big gaps identified.
Balancing the polarities (Current state)	
How is the configuration balanced with respect to each polarity?	

[illegible]
