PROJECT REQUIREMENTS

Project Name	Project Vitality

Functional Requirements

[This section should list the functional requirements for the project including any features or properties of the project's outcomes.]

1. Description of Current Programs
   a. To provide this feature on our website we will need to comb through every single link/sublink and website provided on the UN page under Goal Number 2 and identify links and information that best serves to explain the three main topics we have chosen to focus on.
2. Educational Modules
   a. Based on the previous point, we will be able to streamline our research and thus be able to find and provide highlights of the most important information on the topics we have chosen to focus on.
   b. We may leave places for the UN to add more information or provide input on topics that we felt were unclear or needed further explanation. This would be included in future MVP's of the project, at a stage when our Northstar customers are involved in the project and we have a line of communication with them. Currently no such communication is occurring.
3. Visual Plans
   a. Based on the above two points, our information will be organized and we will be able to propose a plan/blueprint for the UN. We will try to make this a visual plan so it is easier to understand and implement.

Technical/Performance Requirements

[This section should list the technical requirements for the project (e.g., the required technology infrastructure) and any performance requirements (e.g., the minimum response time).]

We will be building a website that will house all the features listed above. We will be creating a wireframe to show the flow and look of our website, which will be shown in upcoming scrums.
