PROJECT REQUIREMENTS

Project Name	Project Vitality

Functional Requirements

[This section should list the functional requirements for the project including any features or properties of the project's outcomes.]

1. Add Participant
   a. This is to quickly and easily add a new participant (Mother) under the care of a community worker. When you click the button to add a new participant, a modal will pop up prompting the user to enter required information about the new participant.
2. Questionnaire
   a. When a new participant is entered, the community worker will be able to complete a questionnaire that will track the participants progress over time.
   b. The questionnaire will consist of a series of questions that can be rated on a scale from 0-10. The rating will eventually be turned into a graph.
3. See Progress through Visual Graph
   a. Based on the above two points, the information stored through the questionnaires will be displayed visually through a combo graph.

Technical/Performance Requirements

[This section should list the technical requirements for the project (e.g., the required technology infrastructure) and any performance requirements (e.g., the minimum response time).]

We will be building a website that will house all the features listed above. We will be creating a wireframe to show the flow and look of our website, which will be shown in upcoming scrums.
